

F-Secure Anti-Virus for Microsoft Exchange

F-Secure Anti-Virus for Microsoft Exchange

Majority of computer viruses arrive via e-mail. Many of the new fast spreading and destructive viruses are especially written to work in Microsoft Exchange/Outlook environment. Therefore it is especially important for Microsoft Exchange users to protect their networks against virus outbreaks. By using antivirus software with your Microsoft Exchange solution, you can protect your corporate network against viruses. A good security solution also stops other type of unwanted content, such as spam and files and information not related to work.

F-Secure® Anti-Virus™ for Microsoft Exchange protects Microsoft Exchange users against viruses, worms and Trojans, scanning both incoming and outgoing messages. The product not only scans e-mail, but it also stops viruses in documents and notes posted to public folders. With F-Secure Anti-Virus for Microsoft Exchange, antivirus protection is transparent and always on as the scanning is done on the e-mail server in real-time. In addition to virus protection, the solution provides spam filtering and other content filtering functionality. Thus, the solution does not only improve security, but it also increases employee productivity, reduces legal liability concerns and saves network bandwidth.

Key Features

Award-winning Antivirus

F-Secure uses multiple virus scanning engines to provide unsurpassed detection and protection against viruses, worms and Trojans.

Provides Several Scanning Options

Supports real-time, manual and scheduled scanning of mailboxes and public folders as well as full and incremental scanning.

Integrated Security with Microsoft Exchange

Uses the latest Microsoft Virus Scanning API 2.5, providing high performance and system stability.

Automatic Virus Definition Updates

Virus definition databases are transparently and automatically updated, typically 1-2 times a day ensuring your system is always up to date.

The screenshot shows the management console for F-Secure Anti-Virus for Microsoft Exchange. The interface includes a navigation bar with 'Home', 'Anti-Virus for Microsoft Exchange', 'Content Scanner Server', and 'Automatic Update Agent'. Below this, there are four main sections, each with a status indicator (a green checkmark) and a 'Configure...' button:

- F-Secure Anti-Virus for Microsoft Exchange 6.40.13**: Running. Statistics: Processed messages: 806, Infected messages: 1345, Stripped attachments: 25.
- F-Secure Content Scanner Server 6.41.109**: Running. Last time virus definition databases updated: 22/12/2004 13:24:20. Database update version: 2004-12-22_01. Scanned files: 2474. Last time infection found: 22/12/2004 13:30:15.
- F-Secure Automatic Update Agent 6.73.758**: Running. Last update check: 22/12/2004 13:24:06. Next update check: 22/12/2004 13:53:01.
- F-Secure Management Agent 5.23.6872**: Running. Communication method: Stand-alone. Last connection to the server: n/a.

At the bottom of the console, there are buttons for 'Show F-Secure Log', 'Export Settings', 'Export Statistics', 'Configure Console...', and 'Help'.

Advanced Message Filtering

With F-Secure Anti-Virus for Microsoft Exchange, antivirus protection is proactive and extremely efficient. In addition to known viruses, the product recognizes new, unknown viruses based on typical features of viruses. You can also protect your network against fast spreading viruses, worms and Trojans by enabling e-mail filtering based on file types, names or key words.

Automated Spam Filtering Option

Optional F-Secure® Spam Control™ for Microsoft Exchange detects annoying and offensive spam messages in organizations e-mail traffic and filters it automatically, transparently, freeing up time for productive work.

Combining Ease-of-use and Advanced Functionality

Simple installation and administration for SMB customers with an easy-to-use web user interface. Advanced users and large customers benefit from the powerful centralized management and cluster support.

Centralized Management for all Areas of Your Network

Integration with F-Secure® Policy Manager™. With this centralized management tool your system administrator can manage the security of workstations, servers and gateways through a single console. Centralized management also enables easy administration of multiple Exchange Servers in a large network.

World's Leading Virus Research

Antivirus products are only as good as the research and dedication behind them. The F-Secure Anti-Virus Research Team is on call 24-hours a day responding to new and emerging threats. The research team, staffed with globally recognized virus experts, develops and distributes protection against new viruses promptly after their discovery and in many instances well in advance of other antivirus vendors.
