

F-Secure Internet Gatekeeper

F-Secure® Internet Gatekeeper™ provides the first line of protection for businesses. As it operates as a separate Internet gateway, it frees corporate servers to provide their service free of viruses, spam and other hostile or questionable content. By deploying F-Secure Internet Gatekeeper, the performance of e-mail servers is directed to real business communication allowing stakeholders to enjoy a spam-free e-mail experience.

F-Secure Internet Gatekeeper is a high-performance and fully automated antivirus and content filtering solution for protecting corporate e-mail and web traffic at the Internet gateway. In addition to virus protection, the solution provides spam filtering, content filtering and access control. F-Secure Internet Gatekeeper does not only improve security, but it also improves employee productivity, reduces legal liability concerns and saves network bandwidth.

Key Features

- Gateway operation
- Virus protection for e-mail and web traffic
- Spam filtering
- Access control
- Interoperable with any firewall and e-mail system
- Local and remote user interface
- High performance and reliable solution
- Automatic virus definition updates
- Virus outbreak management
- Zero hour virus protection
- Content filtering with local policies

Virus protection for e-mail and web traffic

F-Secure Internet Gatekeeper stops hostile content. When deployed between corporate network and the Internet it ensures that viruses are not able to enter or leave the corporate network. F-Secure Internet Gatekeeper features zero hour virus protection and virus outbreak management that offer immediate security against emerging virus outbreaks. Combining both traditional signature-based detection and zero hour virus protection, F-Secure Internet Gatekeeper keeps a company or organization protected from the very first minute an outbreak starts.

Content filtering

F-Secure Internet Gatekeeper offers protection against viruses and undesired file types -like movie files, sound files and other non-work related content – it does so by allowing the administrator to define local policy to strip attachments based on file size, type or name.

Automated spam filtering

Optional F-Secure® Spam Control™ detects and filters annoying and offensive spam messages from organizations e-mail traffic automatically, transparently and frees time for productive work.

Access control

F-Secure Internet Gatekeeper allows administrator define policy that prevents employees from visiting non-work related web sites or sending private e-mail via free e-mail messaging services on the Web.

All-inclusive compatibility

F-Secure Internet Gatekeeper relies into open standards, thus it interoperates with any firewall and e-mail system, scanning web and e-mail traffic passing through the gateway.

Local and remote user interface

F-Secure Internet Gatekeeper provides a web based and easy-to-use local user interface. For larger deployments, F-Secure® Policy Manager™ can be used to centrally administer all F-Secure Anti-Virus products.

High performance and reliability

F-Secure Internet Gatekeeper interoperates with any external network component, firewall, and e-mail system. As the interfaces for associated systems are open standards-based, the resulting system is both reliable and offers the best performance against investment.

Automatic virus definition updates

F-Secure Internet Gatekeeper incorporates a fully automatic update service that updates the antivirus definitions several times a day. You can always be sure that you are properly protected even against new viruses without having to check the status of the product. On top of the automatic update service F-Secure Internet Gatekeeper features zero hour virus protection, and virus outbreak management that cut down the delay of an antivirus update for new emerging threats.
