

F-Secure Protection Service for Business - Advanced

Peace of mind for small and medium sized businesses

IT security challenges of SMBs

Modern business depends heavily on computers. At the same time, criminals are constantly creating new ways to use the Internet for their illegal activities. In spite of these facts, many small and medium sized businesses (SMBs) still lack an up-to-date security solution, which would protect their business environment.

Peace of mind as a service

It is smart to choose security as a service. In this way, you can concentrate on business without having to worry about IT security, security settings or software updates. Instead, you can leave security to professionals. F-Secure® Protection Service™ for Business, Advanced version makes sure that threats from the Internet do not harm your business: your e-mail is working, e-commerce solutions are not disturbed and your confidential data is protected. In short, your business runs smoothly.

F-Secure solution

F-Secure Protection Service for Business, Advanced version protects your business against security threats from the Internet.

No hardware or software investments are needed for managing the security. F-Secure maintains the whole solution, and your local IT security partner monitors and manages your computers. This means direct cost savings to you.

Benefits

With F-Secure Protection Service for Business, Advanced version the benefits are clear. Experts handle your security needs effectively, which allows you to focus on your own business.

The solution is easy to maintain because security updates and software upgrades are automatically delivered to your computers. You always have the latest updates installed.

The solution includes all you need – virus and spyware protection, spam control, intrusion prevention, application control and a firewall.

The award-winning technologies, F-Secure DeepGuard and F-Secure Blacklight, provide the best possible protection against latest threats and hidden malware (rootkits) that are not detected by traditional antivirus solutions.

F-Secure PSB for Workstations

Comprehensive security for desktop and laptop computers:

- > Antivirus, antispymware, intrusion prevention, application control, proactive protection (F-Secure DeepGuard) and rootkit detection (F-Secure Blacklight)
- > Spam filtering
- > Local setting of security features (if allowed by the portal)
- > Security news
- > Automatic virus definition updates
- > Automatic software patches and version upgrades

F-Secure PSB for Servers

Complete security for file servers:

- > Antivirus, antispymware, system control and rootkit detection
- > Local setting of security features (if allowed by the portal)
- > Automatic virus definition updates
- > Automatic software patches and version upgrades

F-Secure PSB Portal

Online tool that F-Secure partners use for managing and monitoring the security status and settings of your IT systems. Communication between protected devices, F-Secure servers and portal is encrypted and cannot be read by outsiders.

Additional Services

You can buy add-on services from your local F-Secure partner. The available services depend on the partner and can be, for example, security auditing, software installation and configuration. The partner can also manage the security features in your system and generate reports of them. Your local trusted partner is trained and certified by F-Secure to take care of all your IT security needs.
